

Acme Corp — Enterprise Security & Compliance Policy (2026)

Version: 2026.2 | Classification: Mandatory Corporate Policy | Applies To: All Employees & Contractors

1. Authentication, Password Complexity & MFA

- **Multi-Factor Authentication (MFA):** Mandatory across all corporate Google Workspace, GitHub, and production AWS/database accounts.
- **Password Requirements:** Minimum 14 characters containing uppercase, lowercase, numbers, and symbols.
- **Password Rotation:** Passwords must be refreshed every 90 days. Reusing the previous 5 passwords is prohibited.

2. Data Classification & Protection

- **Confidential Data:** Customer PII, encryption keys, and proprietary source code must never be stored on unencrypted local drives.
- **Production Data Export:** Exporting production database dumps to personal devices is strictly prohibited.
- **Sanitization:** Staging and development environments must use anonymized, synthetic test data.

3. Incident Response & Security Escalation

- Any lost, stolen, or compromised device must be reported to **security@acme.corp** within 2 hours of discovery.
- Security incident response teams will immediately revoke active sessions and trigger remote device wiping.
